

Helios Aerotech – Airstep Smart Insole System

Product Brief (Sample / Fabricated Content)

Product Overview

Airstep is a lightweight, sensor-driven smart insole system designed to monitor gait, posture, and impact stress in real time for athletes, rehabilitation patients, and industrial workers. Embedded directly into footwear, Airstep continuously captures biomechanical data and syncs it to a mobile application, enabling users and professionals to analyze movement efficiency, detect anomalies, and reduce injury risk.

System Variants

Airstep Core is optimized for daily wear and rehabilitation, while Airstep Pro is designed for sports performance and high-impact training scenarios. Both variants share a common analytics platform and mobile application.

Key Features

Key features include real-time pressure mapping, gait and stride analysis, posture deviation alerts, activity-aware tracking, fatigue and load indexing, rehabilitation guidance, historical movement replay, and multi-user profile support.

Use Cases

Airstep supports sports performance optimization, injury prevention, physiotherapy and rehabilitation, workplace ergonomics analysis, and elderly mobility monitoring.

Mobile App & Analytics

The Airstep mobile application provides live visualization, trend analytics, customizable alerts, and secure cloud synchronization. Pairing is performed via Bluetooth Low Energy and requires minimal setup.

Design & Durability

The insoles are constructed from layered elastomers with sealed electronics, designed to withstand sweat, repetitive flexing, and daily wear conditions.

Technical Specifications

Airstep Core offers up to 5 days of battery life with 50 Hz sampling, while Airstep Pro supports higher-density sensing at up to 120 Hz with a 3-day battery life.

Pricing & Availability

Airstep Core is priced at ■8,999 and Airstep Pro at ■13,999. Enterprise licensing options are available for clinical and institutional deployments.
